MORPHEUS8

REFRESH AND REFINE YOUR BEAUTY

Address skin concerns and irregularities, and discover a more beautiful you.

"Morpheus8 was a game changer! My skin is glowing and radiant. I couldn't be happier with my results."

- HANNAH | PATIENT

WHAT IS MORPHEUS8?

Morpheus8 is a fractional skin treatment that stimulates the underlying layers of the dermis. By targeting the deeper layers of the skin, tissues are triggered to reveal a more radiant youthful appearance.

WHAT AREAS CAN BE TREATED?

Morpheus8 can be used in any area that can benefit from subdermal renewal. The treatments are versatile and customized to deliver optimal results to common areas, such as the face, periorbital region, abdomen, thighs, legs, and buttocks.

HOW MANY SESSIONS ARE RECOMMENDED?

Your practitioner will recommend the ideal number of sessions to be performed based on your personal objectives. Treatment times and frequency will be specifically tailored to obtain the best results.

HOW QUICKLY WILL I SEE RESULTS?

Visible results can be seen within a few days, but typically after three weeks the most noticeable results appear. Improvements continue up to three months after treatment.

WHAT IS THE BENEFIT OF FRACTIONATED ENERGY?

Radiofrequency (RF) energy is a scientifically proven method to stimulate collagen. It is minimally invasive, using a matrix of micro pins to target the deeper layers of the skin with almost no patient downtime.

CAN ANYONE USE MORPHEUS8?

The benefit of Morpheus8's color blind technology is that it can be used on all skin types. The unique properties allow even darker tones to be treated.

CAN THIS BE USED IN COMBINATION WITH OTHER TREATMENTS?

Yes, Morpheus8 can be used in the same treatment session, or a few days after other treatments. Morpheus8 can also be combined with other InMode energy procedures or injectables to achieve more extensive results.

WHAT KIND OF POST PROCEDURE CARE IS REQUIRED?

Downtime after a Morpheus8 procedure is minimal. Patients should expect to see a slight redness immediately following the treatment and micro lesions a few days after treatment. It is recommended to moisturize the treatment area, avoid direct sun exposure, and use a broad-spectrum sunscreen.
